

Hotel Management System – Record Check in

Name:

Clear room status

Description:

This use case covers the navigation of the application for setting the room status to be 'available' at a certain time every day.

Actors:

Staff

Triggers:

The use case is triggered by customers who have made a reservation but do not show up and those who have left the hotel but forget to check out.

Preconditions:

The room is empty but the room status shows reserved or check-in

Postconditions:

After the use case is complete, all room status will be set to 'available' which implies availability for reservation

Courses of events:

Basic course of events:

1. The user performs the display all room status use case
2. The user select the relevant room number to be set to empty
3. The system highlights the booking to indicate it is selected
4. The system selects the clear room status function
5. The system asks the user to confirm
6. The user selects yes

7. The room status is set to 'available' and the display is updated

8. The user selects no

9. The room status is not set to 'available'

Extension Points:

None

Inclusions:

Display all room status
